Denron Plumbing and HVAC, LLC. Secures Project for Manchester Community College New Student Center

MANCHESTER, New Hampshire —August 15, 2012—Denron Plumbing and HVAC, LLC. (denronph.com), a Manchester based plumbing and HVAC subcontractor of over 38 years, announces their latest project, Manchester Community College's new 27,000 square foot student center.

The student center, which will be the first for Manchester Community College, will house a fitness center, games and recreations area, performance stage, student lounge, storage area and staff and student organizations offices, is scheduled for completion in the spring of 2013.

The 2-story student center will replace the College's old cafeteria and extend the campus out towards 293. The center was designed by architects Fred Urtz and Ron Lammare from Lavallee Brensinger Architects.

The construction contract for the new center was awarded to Eckman Construction, another New Hampshire based company. "We have done many projects with Eckman in the past," said Glenn Berube, Denron's Senior Project Manager. "Our past performance working with them in the academic market has given them a comfort level with our team."

The student center is one of the many projects Denron has performed in the higher education market. Other projects include University of New Hampshire, Keene State College, and Anna Maria College.
